PROFILE

Third-year B.Tech Information Technology student (CSPIT, CHARUSAT University) with hands-on experience shipping full-stack and AI-integrated products end-to-end — from backend architecture and deployment to production security hardening. Comfortable moving fast across Node.js, and React while treating system design and security as first-class concerns. Actively building toward SDE/backend roles, with a growing focus on AI/ML integration.

EDUCATION

B.Tech, Information Technology *Batch 2024–2028 / CGPA – 7.00*
CSPIT, CHARUSAT University, Anand, Gujarat

EXPERIENCE

Web Brains Technologies *Intern*

- Working across full-stack and backend development, contributing to production features and deployment workflows.

Synent Technologies *Python Development Intern*

- Built a Job Listings Web Scraper: CLI scraper + Flask REST API + dark-themed demo frontend, delivered as part of an 8-task internship program.
- Focused on backend services and API development using Python and Node.js.

PROJECTS

KnowBot — AI Knowledge Assistant *FastAPI, LangChain, Gemini 2.0 Flash, Qdrant, Sarvam AI, AWS S3*

- Built an end-to-end RAG assistant for Google Solution Challenge 2026 (SDG 8), targeting IT SMEs in India, deployed on AWS EC2 with a React/Vite frontend on Vercel.
- Integrated Sarvam AI for Indian-language speech-to-text and resolved audio format/resampling and vector indexing issues; later migrated the vector store to a self-hosted Dockerized Qdrant instance.

TableTap — QR-Based Multi-Tenant Café Ordering SaaS *React, Vite, TypeScript, Node/Express, SQLite · Live on Railway/Vercel*

- Built a QR-code ordering platform where customers scan a table code to browse the menu and order directly from their phone — no app needed — while owners get a live dashboard to manage orders and availability.
- Engineered a real-time shared table-session cart that syncs orders across every device at the table, verified via multi-phone testing, with rate-limited login and encrypted password resets; priced as an affordable alternative to Petpooja and DotPe at ₹499/month.
- Project Link :<https://cafe-software.vercel.app/menu/chai-corner>

NutriScann — AI Nutrition Scanning App *React 19, TypeScript, Firebase Auth, Express/Mongoose, Gemini Vision*

- Built an AI nutrition scanner that turns a photo of any food or packaging into an instant nutrition breakdown via Gemini Vision, with Firebase authentication keeping each user's scan history private and secure.
- Hardened the platform for production: restructured the backend into config/middleware/routes/services, moved image storage to Cloudinary, added rate limiting/CORS protections, and remediated a live API-key exposure in the public repo.

SKILLS & TECH STACK

Languages: Python, JavaScript/TypeScript, C++, SQL

Backend: Node.js, Express, FastAPI, Flask, REST API design

Frontend: React, Vite, responsive UI/design systems

Data & AI: MongoDB/Mongoose, SQLite, Qdrant, LangChain,

Cloud & DevOps: Vercel, Railway, Git/GitHub,Render

Core CS: Data Structures & Algorithms, DBMS, OS, Software Engineering
